

Bird-noculars!

View from a window, watch from your garden, or explore on your walk to spot birds. No binoculars to help focus your search? Never mind - make your own birdnoculars to spot your feathered friends! Look high and low and see how many you can find. Make a record of how many and maybe what types and let us know!

What you will need

Cardboard tubes

Any bits and bobs for decorating- I used string, felt tips and leaves!

Instructions

Either glue or sticky tape your tubes together- if you don't have that, then wool or string works well to tie together. Then weave leaves in or stick anything you like to decorate and camouflage your birdnoculars.

Have fun spotting! We'd love to see your creations.
